DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/29/02 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-20 and 24-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Irvine et al #6,033,155.

4. Irvine et al, see figure 6 and col. 7, lines 20-40, discloses a retaining panel made from PVC, the panel comprising a central portion 73, first and second side portions 78, 79, and first 68 and second 69 flanges, said first flange including a female connecting portion 75 that is substantially C-shaped and the second flange including a male connection portion 74 that is substantially T-shaped which allow for connection to a similar adjacent panel. The panel has a substantially uniform thickness, the side portions extend from the central portion at the same angle, the central portion has a substantially level outer surface, the first and second portions having intermediate sections that have substantially level outer surfaces, and the proximal portions of the flanges have substantially level outer surfaces, and wherein the central portion is approximately parallel to the proximal portions of the flanges. The distal portion of the second flange leveling to being substantially parallel to the proximal portion. Irvine et al also teaches that it is known to provide a panel 12 having a width of 2 feet (24 inches) from distal edge to distal edge as set forth at column 8, lines 35-37.

Response to Arguments

5. Applicant's arguments and affidavit with respect to claims 1-20 and 24-26 have been considered but are moot in view of the new ground(s) of rejection.
